

Managing Leafy Spurge

How can I manage leafy spurge?

- Mechanical and chemical controls are most useful and cost-effective with small or new infestations
- Biological controls are an environmentally friendly way to control spurge
- Sheep and goats will readily graze leafy spurge
- Predatory insects are used to retard spurge growth and prevent seed development
- Cultivation will control leafy spurge in cropland

For more information contact:
Your local weed supervisor or
Manitoba Agriculture, Food
and Rural Initiatives

Leafy spurge costs Manitobans over \$20 million a year
