

Preventing Leafy Spurge

How do I prevent leafy spurge infestations?

- Avoid transporting hay, landscaping soil, fill dirt and gravel from infested areas
- Clean vehicles and machinery moving from infested to non-infested areas
- Before moving animals from infested areas, quarantine them for 3-5 days
- Avoid driving through or mowing patches of leafy spurge when the weed has viable seeds during July and August
- Avoid cultivation through patches where root fragments and seeds may be dragged to non-infested areas

For more information contact:
Your local weed supervisor or
Manitoba Agriculture, Food
and Rural Initiatives

Leafy spurge costs Manitobans over \$20 million a year
